

S19 Janów Lubelski bypass

Janów Lubelski

Construction of Janów Lubelski bypass along the S19 Lublin-Rzeszów expressway will make life easier for the town's residents who have been waiting for this for many years.

The project

GEO-Instruments Polska has designed and executed a comprehensive programme of load tests of deep foundations made in CFA pile technology and driven piles.

The challenge

Adjusting the schedule of load tests to the pace of work being carried out by the General Contractor of the project.

The solution

In two months, we performed 20 static test loads, 5 dynamic test loads, and 558 Sonic-Echo pile continuity tests.
